Personal Profile

Final-year AI/ML student specializing in Agentic AI, RAG architectures, and full-stack development. Experienced in building autonomous research agents and scalable applications, bridging the gap between advanced deep learning research and production-ready code.

Education

Bachelor of Engineering - CSE in AIML

2022 – 2026

Chandigarh University, Mohali | GPA: 6.82/10

- Relevant Coursework:** Robotics Intelligence, Autonomous Navigation, Visual Object Recognition, Deep Learning, Advanced Data Structures.
- Thesis:** Modular Primitives for Multi-Modal Robotic Action Models (*In Progress*)

Key Research Interests: Agentic AI, Multi-Modal Learning, Robotic Intelligence, Deep Learning Optimization.

Experience

Industrial Training in AIML | IIT Ropar (Collaboration)

Jan 2026 – Present

- Gained proficiency in neural network optimization and deep learning deployment pipelines.
- Collaborated on large-scale data pipeline architecture, focusing on training stability and model scalability.

AI Research Intern | Infosys Springboard

Dec 2025 – Feb 2026

- Autonomous Cognitive Engine:** Architected an agentic framework for long-horizon research, decomposing complex tasks into multi-step execution plans using ReAct patterns.
- Persistent Memory:** Integrated RAG-based pipelines for long-term context retention, enabling the system to synthesize insights across extensive datasets.

Remote Internship | IIT Kanpur (Dept. of Electrical Eng.)

Feb 2024 – Mar 2024

- Interactive Dictionary AI:** Developed a RAG-powered application for intelligent data retrieval.
- Infrastructure Optimization:** Refactored forum architecture to enhance database performance, reducing query latency significantly.

Projects

Cerebro: Autonomous Cognitive Engine (<https://github.com/Maahijoshi28/Cerebro>)

(LangGraph|Langchain|LLM|Python|vector database)

- Developed an autonomous multi-agent framework utilizing LangGraph and RAG pipelines to automate complex, long-term research tasks with self-correcting logic.

Collaborative Dashboard (<https://github.com/Maahijoshi28/collaborative-studio>)

(Flask|Flask-SocketIO|SQLite|Render)

- Developed a real-time collaborative dashboard using SocketIO for low-latency, multi-user interaction.
- Implemented persistent, lightweight data storage using SQLite for efficient cloud deployment.

AI-Powered Expense Tracker (<https://github.com/Maahijoshi28/expense-tracker>)

(Node.js|Express|MongoDB|RESTful API)

- Engineered a scalable full-stack financial tracking system with automated CRUD operations.
- Utilized Mongoose for structured data schema management and reliable storage.

Autonomous Manipulation System (<https://github.com/Maahijoshi28/Autonomous-Cognitive-Engine-for-Deep-Research-and-Long-Horizon-Tasks>)

(Python|LangChain|LangSmith|LLM APIs)

- Developed a point-cloud-based pipeline for object identification and collision-aware motion planning.
- Validated system performance on physical robotic arm simulations.

Additional Projects: BhartTeleMed (Telemedicine Platform) | Diabetic Retinopathy Prediction (ML Classification) | Snrkshn (Smart Waste Management)

Certifications & Awards

- Certifications:** Oracle Cloud GenAI Certified Professional | IBM Predictive Analytics (Advanced) | Google Foundations of Data Science | CISCO
- Awards:** Runner-up (HACK-War Hackathon 2024) | Runner-up (Tekathon SIH 2025 selection)
